Introduction to a new risk of bias tool for network meta-analysis

Wednesday, September 27, 2023 12:00-13:00 PDT

Network meta-analyses (NMA) provide comparative evidence about the effects of all healthcare interventions for a given condition. However, NMA results can be undermined by flaws in design, conduct, analyses and reporting. Several tools are available for the critical appraisal of an NMA. However, none aim specifically to assess the risk of bias in a network meta-analysis.
