

## Methods Speaker Series

### *Right Review tool*

Wednesday, October 25, 2023 12:00-13:00 PDT

With dozens of knowledge synthesis methods to choose from, it can be daunting to select the “right” method, especially for those new to conducting a knowledge synthesis or those unfamiliar with different knowledge synthesis methods. Recognizing this challenge, a web-based decision support tool (“Right Review”) was developed to help users think through which knowledge synthesis methods are most appropriate for their research questions. In this webinar, Krystle Amog will describe the development and evaluation of the Right Review tool, as well as its practical application and the upcoming update of the tool.
