

Likelihood Ratio Meta-Analysis

TI Methods Speaker Series Webinar

Wednesday, November 29, 2023 12:00-13:00PM PST

Dr Colin Dormuth will present the Likelihood Ratio Meta-Analysis (LRMA) method, an approach used to pool data from separate studies to quantitatively assess where the total evidence points. Dr. Dormuth will describe the advantages of this novel method over the usual meta-analysis, and will also demonstrate the LRMA method using an example including population-based cohort studies in five Canadian provinces and the US IBM MarketScan database.

Dr. Colin Dormuth
Sc.D.

Associate Professor, Department of Anesthesiology,
Pharmacology & Therapeutics, Faculty of Medicine,
University of British Columbia
Co-Managing Director of the Therapeutics Initiative
